

EOT Project

Introduction:

As a part of our Foundation Computing project, we have to choose a topic, and then evaluate websites that relevant to this topic. Our evaluating should be based on criteria. I chose my topic about BMW 745Li, one of the most comfortable cars on the world. Moreover, it has a sport engine to give its driver feeling that he is driving a comfortable, luxury and sport car at the same time. This advantage isn't possible on most of cars in the world. Because of that I chose BMW 745Li because it's match all my requirements.

Here are some web pages that are relevant to my topic:

1. <http://www.mycars.com/745li03.html>

Rate: 60

This website has a lot of good information, they mentioned all necessary information but they need to add some more details about the car. In addition, the website isn't up to date, and the author didn't write his name. On other hand, all information they wrote are accurate information, so I can trust this website.

2. http://www.accessoriesgiant.com/bmw-745_li.html

Rate: 56

- The information is probably accurate
- The information is relevant to my topic but not answer my questions
- Present facts with little analysis
- The author is private individual could be any one
- Name is given but I can't contact them
- This site published by a private individual
- The domain .com

- The date isn't given
- The site is easy to read
- The presentation is clear without mistakes
- There no graphics
- Many reference and links
- There is no navigation aids
- No commercial and pop-ups
- All free site

3. <http://www.bmw.com/generic/com/en/products/automobiles/showroom/7series/se-dan/index.html> **(The Best) Rate: 81**

This is the best website I found it about my project, because it has accurate, relevant and balanced information. The author is an employee on BMW Company so it is trusted information. Also it is very easy to contact them. But the problem is the site's domain is .com, so this will decrease the rate 6 points. In addition, the date isn't given. And there are few referenced and links. I add 5 points for this website because it made by BMW factory, and they attached all information needed about these car except relative links to other sites.

As you can see in the table below, these are some comparing between the web sites

Site	Rate	Usable?!
http://www.bmw.com	81	Absolutely Yes
http://www.mycars.com/745li03.html	60	Yes
http://www.accessoriesgiant.com/bmw-745_li.html	56	Some Information
